

Quantum Mechanics

Mathematical Structure
and
Physical Structure

Part 2

John R. Boccio
Professor of Physics
Swarthmore College

June 17, 2010

Contents

11	Time-Dependent Perturbation Theory	939
11.1	Theory	939
11.1.1	What is the physical meaning of this result?	945
11.2	Atomic Radiation and Selection Rules	958
11.2.1	The Electric Dipole Approximation	959
11.2.2	Induced Emission and Absorption	961
11.3	A Real Physical Process - Ionization	964
11.3.1	Evaluation of the Matrix Element	966
11.4	Adiabatic and Sudden Approximations	968
11.5	Problems	976
11.5.1	Square Well Perturbed by an Electric Field	976
11.5.2	3-Dimensional Oscillator in an electric field	977
11.5.3	Hydrogen in decaying potential	977
11.5.4	2 spins in a time-dependent potential	977
11.5.5	A Variational Calculation of the Deuteron Ground State Energy	978
11.5.6	Sudden Change - Don't Sneeze	978
11.5.7	Another Sudden Change - Cutting the spring	978
11.5.8	Another perturbed oscillator	979
11.5.9	Nuclear Decay	979
11.5.10	Time Evolution Operator	979
11.5.11	Two-Level System	980
11.5.12	Instantaneous Force	980
11.5.13	Hydrogen beam between parallel plates	980
11.5.14	Particle in a Delta Function and an Electric Field	980
11.5.15	Nasty time-dependent potential [complex integration needed]	981
11.5.16	Natural Lifetime of Hydrogen	982
11.5.17	Oscillator in electric field	982
11.5.18	Spin Dependent Transitions	983
11.5.19	The Driven Harmonic Oscillator	984
11.5.20	A Novel One-Dimensional Well	984
11.5.21	The Sudden Approximation	985
11.5.22	The Rabi Formula	985

11.5.23 Rabi Frequencies in Cavity QED	986
12 Identical Particles	989
12.1 Theoretical ideas	989
12.2 Bosons with Spin = 0	994
12.3 Spin = 1/2 Fermions	996
12.4 The N-Electron Atom	1002
12.5 The Helium Atom	1008
12.6 Multielectron Atoms	1016
12.6.1 Screening	1018
12.6.2 Shell Structure	1019
12.7 Angular Momentum Coupling	1023
12.7.1 LS Coupling	1024
12.7.2 Hund's Rules	1031
12.7.3 JJ-Coupling	1032
12.8 Spherical Harmonics Addition Theorem	1036
12.8.1 Orbital Angular Momentum	1036
12.8.2 The Addition Theorem	1039
12.9 Problems	1041
12.9.1 Two Bosons in a Well	1041
12.9.2 Two Fermions in a Well	1042
12.9.3 Two spin-1/2 particles	1042
12.9.4 Hydrogen Atom Calculations	1043
12.9.5 Hund's rule	1044
12.9.6 Russell-Saunders Coupling in Multielectron Atoms	1044
12.9.7 Magnetic moments of proton and neutron	1045
12.9.8 Particles in a 3-D harmonic potential	1046
12.9.9 2 interacting particles	1046
12.9.10 LS versus JJ coupling	1047
12.9.11 In a harmonic potential	1047
12.9.12 2 particles interacting via delta function	1047
12.9.13 2 particles in a square well	1048
12.9.14 2 particles interacting via a harmonic potential	1048
12.9.15 The Structure of helium	1048
13 Scattering Theory and Molecular Physics	1051
13.1 Scattering Theory	1051
13.1.1 Greens Functions	1053
13.1.2 Cross Sections	1059
13.1.3 Partial Waves	1060
13.1.4 The Optical Theorem	1065
13.1.5 Born Approximation	1065
13.1.6 A General Property of Phase Shifts	1068
13.1.7 Examples	1069
13.1.8 Born Approximation Examples	1073

13.2	Molecular Physics	1077
13.2.1	General Properties of Molecules	1077
13.2.2	Examples	1083
13.2.3	Vibrational and Rotational Levels of a Molecule	1091
13.3	Problems	1093
13.3.1	S-Wave Phase Shift	1093
13.3.2	Scattering Slow Particles	1093
13.3.3	Inverse square scattering	1093
13.3.4	Ramsauer-Townsend Effect	1094
13.3.5	Scattering from a dipole	1094
13.3.6	Born Approximation Again	1094
13.3.7	Translation invariant potential scattering	1094
13.3.8	$\ell = 1$ hard sphere scattering	1095
13.3.9	Vibrational Energies in a Diatomic Molecule	1095
13.3.10	Ammonia Molecule	1095
13.3.11	Ammonia molecule Redux	1096
13.3.12	Molecular Hamiltonian	1097
13.3.13	Potential Scattering from a 3D Potential Well	1097
13.3.14	Scattering Electrons on Hydrogen	1098
13.3.15	Green's Function	1098
13.3.16	Scattering from a Hard Sphere	1099
13.3.17	Scattering from a Potential Well	1099
13.3.18	Scattering from a Yukawa Potential	1099
13.3.19	Born approximation - Spin-Dependent Potential	1099
13.3.20	Born approximation - Atomic Potential	1100
13.3.21	Lennard-Jones Potential	1100
13.3.22	Covalent Bonds - Diatomic Hydrogen	1101
13.3.23	Nucleus as sphere of charge - Scattering	1102
14	Some Examples of Quantum Systems	1103
14.1	Coherent and Squeezed States	1103
14.2	Electron in a circular wire	1108
14.3	Spin-Orbit Coupling in Complex Atoms	1112
14.4	Zeeman Effect in Complex Atoms	1115
14.4.1	Method #1: Plausibility Derivation	1116
14.4.2	Method #2: Full Formal Derivation	1116
14.5	Neutron Interferometry	1117
14.5.1	Neutron Interferences	1119
14.5.2	The Gravitational Effect	1120
14.6	The Penning Trap	1122
14.6.1	Motion of an Electron in a Penning Trap	1122
14.6.2	The Transverse Motion	1124
14.6.3	Measurement of Electron Anomalous Magnetic Moment	1125
14.7	Schrodinger's Cat	1126
14.7.1	Schrodinger's Cat - a more detailed presentation	1127

14.7.2	Construction of a Schrodinger-Cat State	1136
14.7.3	Quantum Superposition Versus Statistical Mixture	1137
14.7.4	The Fragility of a Quantum Superposition	1140
14.8	The Quantum Eraser	1143
14.8.1	Magnetic Resonance	1143
14.8.2	Ramsey Fringes	1145
14.8.3	Detection of the Neutron Spin State	1149
14.8.4	The Actual Quantum Eraser	1151
15	States and Measurement	1155
15.1	State Preparation/Determination	
	Density Matrix Revisited	1155
15.1.1	State Preparation	1155
15.1.2	State Determination	1160
15.1.3	Spin State ($S = 1/2$)	1162
15.1.4	Spin State ($S = 1$)	1163
15.1.5	Composite Systems	1167
15.2	Measurement and Interpretation of States	1173
15.2.1	Example of Spin Measurement	1173
15.2.2	A General Theorem of Measurement Theory	1175
15.2.3	The Interpretation of the State Vector	1177
15.2.4	The Measurement Theorem for General States	1180
15.2.5	Which Wave Function?	1181
15.2.6	Spin Recombination Experiment	1184
15.2.7	Joint and Conditional Probabilities	1190
15.2.8	A General Experiment and Coupling to the Environment	1218
15.3	Kochen-Specker Theorem	1222
15.3.1	Theorem (due to Kochen and Specker)	1227
15.4	The Logic of Quantum Propositions	1236
15.4.1	The Meaning of <i>True</i>	1236
15.4.2	Is "False" the Same as "Not True"?	1240
15.5	Quantum Mechanical Picture of the World	1247
15.5.1	The Model	1247
15.5.2	The Question	1251
15.5.3	The Geometrical Lemma	1253
15.5.4	The Theorem	1259
15.5.5	The Discrete Version	1262
15.6	Problems	1266
15.6.1	Measurements in a Stern-Gerlach Apparatus	1266
15.6.2	Measurement in 2-Particle State	1267
15.6.3	Measurements on a 2 Spin-1/2 System	1268
15.6.4	Measurement of a Spin-1/2 Particle	1269
15.6.5	Mixed States vs. Pure States and Interference	1269
15.6.6	Which-path information, Entanglement, and Decoherence	1271
15.6.7	Livio and Oivil	1272
15.6.8	Measurements on Qubits	1273

15.6.9	To be entangled....	1273
15.6.10	Alice, Bob and Charlie	1273
16	The EPR Argument and Bell Inequality	1275
16.1	Hidden variables and Bell's Inequalities-1st Try	1275
16.1.1	The Electron Spin	1275
16.1.2	Correlations Between the Two Spins	1276
16.1.3	A Simple Hidden Variable Model	1279
16.2	Bell's Theorem and Experimental Results	1281
16.3	The EPR(Einstein-Podolsky-Rosen) Argument-Quick Overview	1283
16.3.1	The Bell Inequality again	1285
16.4	EPR and Bell - The Details	1288
16.4.1	Single-Photon Interference	1289
16.4.2	Basic Formalism	1303
16.5	Inseparable Photons (the EPR Paradox) including some history	1306
16.5.1	The Philosophical Stakes in the Debate	1306
16.5.2	From Como to Brussels (1927-30)	1307
16.5.3	From Brussels to the EPR Paradox (1930-35)	1308
16.5.4	Elementary Introduction to the EPR Paradox	1309
16.5.5	The EPR Paradox (1935-52)	1311
16.5.6	The BCHSH Inequality (1964)	1312
16.5.7	BCHSH Inequality(Bell's inequality in real world)	1315
16.5.8	The Beginnings of the Experiment at Orsay (1976)	1319
16.6	The Principle of Non-Separability	1326
16.7	An Example and a Solution - Bell's Theorem with Photons	1328
16.8	Non-Locality, EPR and Bell - a last time	1332
16.8.1	The Bell Inequalities	1336
16.9	Bayesian Probability in QM	1338
16.9.1	Using Bayesian Ideas in Analysis of Experiments	1338
16.9.2	Simple Example	1340
16.9.3	Simple Ideas	1341
16.9.4	More about the Greenberger-Horne-Zeilinger(GHZ) State	1349
16.10	Problems	1351
16.10.1	Bell Inequality with Stern-Gerlach	1351
16.10.2	Bell's Theorem with Photons	1352
16.10.3	Bell's Theorem with Neutrons	1353
16.10.4	Greenberger-Horne-Zeilinger State	1354
17	Path Integral Methods	1355
17.1	Historical Remarks	1355
17.2	Motivation	1355
17.3	Path Integrals in Quantum Mechanics	1356
17.3.1	General ideas	1356
17.3.2	Examples	1361
17.4	The Classical Limit	1364
17.4.1	"Derivation" of the Principle of Least Action	1364

17.5	Topology and Path Integrals in Quantum Mechanics	1367
17.5.1	Aharonov-Bohm Effect	1367
17.6	Evaluation of Path Integrals - Details	1370
17.6.1	Propagator for a Free Particle	1371
17.6.2	Propagator for a Quadratic Lagrangian	1378
17.6.3	Propagator of a Harmonic Oscillator	1382
17.7	Problems	1384
17.7.1	Path integral for a charged particle moving on a plane in the presence of a perpendicular magnetic field	1384
17.7.2	Path integral for the three-dimensional harmonic oscillator	1385
17.7.3	Transitions in the forced one-dimensional oscillator	1385
17.7.4	Green's Function for a Free Particle	1386
17.7.5	Propagator for a Free Particle	1386
18	Solid State Physics	1387
18.1	Crystal Structure and Symmetry	1387
18.1.1	Symmetry of the Crystal System	1388
18.2	Bloch Theorem, the Reciprocal Lattice and Brillouin Zones	1401
18.2.1	Translation Operators in Configuration Space	1401
18.2.2	Derivation of Bloch's Theorem	1403
18.3	Free-Electron and Weak-Binding Approximations;1-Dimension	1418
18.3.1	The Free-Electron Approximation	1418
18.4	Introduction to the Weak-Binding Approximation	1427
18.5	The Kronig-Penney Model	1437
18.5.1	Exact Analysis	1437
18.6	Free-Electron and Weak-Binding Approximations;2-Dimensions	1444
18.6.1	The Free-Electron Approximation	1444
18.7	Problems	1468
18.7.1	Piecewise Constant Potential Energy One Atom per Primitive Cell	1468
18.7.2	Piecewise Constant Potential Energy Two Atoms per Primitive Cell	1469
18.7.3	Free-Electron Energy Bands for a Crystal with a Primitive Rectangular Bravais Lattice	1470
18.7.4	Weak-Binding Energy Bands for a Crystal with a Hexag- onal Bravais Lattice	1470
18.7.5	A Weak-Binding Calculation #1	1471
18.7.6	Weak-Binding Calculations with Delta-Function Potential Energies	1472
19	Second Quantization	1475
19.1	Identical Particles Revisited	1475
19.1.1	Indistinguishability	1475
19.1.2	State Vectors	1476
19.2	Occupation Number Space	1477
19.2.1	Creation and Annihilation Operators	1477

19.2.2 An Example	1485
19.3 Second Quantized Operators	1491
19.3.1 Example - Gas of N Non-Interacting Spin 1/2 Fermions	1495
19.4 Pair Correlation Function	1498
19.5 Hanbury-Brown and Twiss Experiment	1503
19.6 The Hamiltonian	1507
19.6.1 An Example	1508
19.7 Bogoliubov Transformation, Quasiparticles and Superfluidity	1510
19.8 Spontaneous Symmetry Breaking in Quantum Mechanics	1515
19.8.1 The Harmonic Crystal	1516
19.8.2 The Thin Spectrum	1517
19.8.3 Subtleties	1522
19.9 Problems	1524
19.9.1 Bogoliubov Transformations	1524
19.9.2 Weakly Interacting Bose gas in the Bogoliubov Approximation	1524
19.9.3 Problem 19.9.2 Continued	1525
19.9.4 Mean-Field Theory, Coherent States and the Gross-Pitaevkii Equation	1526
19.9.5 Weakly Interacting Bose Gas	1527
19.9.6 Bose Coulomb Gas	1527
19.9.7 Pairing Theory of Superconductivity	1527
19.9.8 Second Quantization Stuff	1528
19.9.9 Second Quantized Operators	1530
19.9.10 Working out the details in Section 19.8	1530

20 Relativistic Wave Equations

Electromagnetic Radiation in Matter	1533
20.1 Spin 0 particles: Klein-Gordon Equation	1533
20.1.1 How to find correct form of relativistic wave equation?	1534
20.1.2 Negative Energy States and Antiparticles	1538
20.2 Physics of the Klein-Gordon Equation	1541
20.3 Free Particles as Wave Packets	1547
20.4 Bound State Problems	1551
20.4.1 Nonrelativistic Limit	1554
20.5 Relativistic Spin 1/2 Particles - The Dirac Equation	1555
20.5.1 Lorentz Transformation of Spin	1555
20.6 The Dirac Equation	1564
20.6.1 Nonrelativistic Limit	1565
20.6.2 Currents and Continuity Equations	1567
20.6.3 Free Particle Solutions	1569
20.6.4 More About Currents	1573
20.6.5 Non-relativistic Limit	1576
20.6.6 The Dirac Hydrogen Atom	1578
20.7 Electromagnetic Radiation and Matter	1598

20.7.1	Interacting with the Classical Radiation Field	1598
20.7.2	Relation to Gauge Invariance	1600
20.7.3	Interactions	1601
20.7.4	Induced Absorption and Emission	1602
20.7.5	Quantized Radiation Field and Spontaneous Emission	1605
20.8	Problems	1610
20.8.1	Dirac Spinors	1610
20.8.2	Lorentz Transformations	1610
20.8.3	Dirac Equation in 1 + 1 Dimensions	1610
20.8.4	Trace Identities	1611
20.8.5	Right- and Left-Handed Dirac Particles	1611
20.8.6	Gyromagnetic Ratio for the Electron	1612
20.8.7	Dirac \rightarrow Schrodinger	1612
20.8.8	Positive and Negative Energy Solutions	1612
20.8.9	Helicity Operator	1612
20.8.10	Non-Relativistic Limit	1612
20.8.11	Gyromagnetic Ratio	1613
20.8.12	Properties of γ_5	1613
20.8.13	Lorentz and Parity Properties	1613
20.8.14	A Commutator	1613
20.8.15	Solutions of the Klein-Gordon equation	1613
20.8.16	Matrix Representation of Dirac Matrices	1614
20.8.17	Weyl Representation	1614
20.8.18	Total Angular Momentum	1615
20.8.19	Dirac Free Particle	1615
21	Interacting Fields and Feynman Diagrams	1617
21.1	Relativistic Quantum Mechanics of Free Particles	1617
21.1.1	Hilbert Space	1617
21.1.2	Fields	1624
21.1.3	Structure of Hilbert Space	1629
21.2	Interacting Fields - Part 1	1630
21.2.1	Physical System	1630
21.2.2	Hilbert Space	1631
21.3	Interacting Fields - Part 2	1636
21.3.1	Interpolating Fields	1636
21.4	Interacting Fields - Part 3	1645
21.4.1	Feynman Rules	1645
21.5	Interacting Fields - Part 4	1652
21.5.1	Feynman Propagator	1652
21.5.2	Scattering Cross Section	1653
21.5.3	Lifetime	1658
